

ADVANTAGES

- ✓ New fully multi-coated optics
- ✓ Bright, clear viewing
- ✓ Compact, lightweight design
- ✓ Waterproof construction
- ✓ Nitrogen-purged
- ✓ Full-body rubber coating
- ✓ Long eye relief for fatigue-free viewing

A-SERIES

AP 8X30 WP
AP 10X30 WP

Model	Art. Code	EAN
AP 8x30 WP	65931	0027075288768
AP 10x30 WP	65932	0027075288775

Magnification	8x	10x
Objective lens diameter	30 mm	30 mm
Type	Porro Prism Center Focusing	
Lens Coating	New fully multi-coated optics	
Prism	BaK4	
Twilight Factor	14	9
Field of View (at 1.000 m)	122.3 m	96.1 m
Close focus	3 m	3 m
Exit Pupil	3.75 mm	3 mm
Eye Relief	17.2 mm	18.8 mm
Eyecups	Twist-Up	
Waterproof	Yes (JIS Class 6) – Nitrogen purged	
Tripod adaptor	With adapter TP-3 - PENTAX No. 69554	
Size (LxWxH in mm)	119.5 x 158 x 57	
Weight (g)	458	463
Supplied accessories	Objective and eyepiece caps, case, strap	

AP 8X30 WP AP 10X30 WP

A-series – Consists of roof and porro prism models with objective lenses < 40mm. Offering impeccable viewing quality through the application of the same advanced coatings, this series is considered the compact, portable and durable smaller brother of the S-series. Users can enjoy a mobility convenience without compromising optical performance.

Compact, lightweight, waterproof porro-prism binoculars designed for easy, bright viewing of nature, wildlife and sports events. This series of porro-prism binoculars benefits from solid waterproof construction, making it ideal for a variety of outdoor and indoor activities.

Main Features

New Fully-multi-coated optics

Fully multi-coated lenses serve the essential purpose of maximizing the amount of light passing through a lens, thereby prevent flare and ghosting from interfering with your view. PENTAX applies multiple layers of coatings to every surface of every element and prism in the full Sport Optics line-up. These fully-multi-coated optics assure the maximum light transmission resulting in a clear, crisp view of the world.

PENTAX Waterproofing

PENTAX waterproof products are fully sealed and purged with laboratory grade nitrogen to provide a fog proof view in the harshest weather conditions. With a JIS Class 6 rating, PENTAX waterproof binoculars can even be submerged in up to 3 feet of water.

Nitrogen purged

Nitrogen is a chemical element and a colorless, odorless and tasteless gas. It contains very little humidity and is therefore used to “purge” binoculars and spotting scopes of the high humidity air that is part of our environment. Due to the low humidity factor, nitrogen prevents condensation from forming on the internal lenses of optical instruments during phases of rapid temperature change. Furthermore, because nitrogen is purged into the optical instrument at slightly above atmospheric pressure, dust and other miniscule particles are prevented from entering the housing.

Long eye relief design

The long eye relief offered in all PENTAX Sport Optics allows the viewer to see the entire field of view clearly and effortlessly. This is especially beneficial to eyeglass wearers, and allows viewing for extended periods of time without added eye strain.

Other Features

- Helicoid four-stop eyepiece rings that permit fine adjustment for maximum viewing comfort
- Exterior rubber coating that provides the binoculars with superb resistance to shocks and impacts.
- A minimum focusing distance of three meters for a sharp view of close-range subjects
- Easy mounting on a tripod, in combination with the optional Tripod Adapter N or TP-3
- Rain-shielding eyepiece rings to prevent the intrusion of rain and dust
